Re: Architectural Stone Company

I worked closely with Architectural Stone on Gearhart Hall, a 1940s Gothic classroom building at the heart of the University of Arkansas campus. The project, designed by Robert A.M. Stern Architects, involved restoration of the building's two existing wings and construction of a third wing that extended the architectural language, materials, and details of the existing. Implementation of the design required comprehensive knowledge of selecting, procuring, cutting, installing, and restoring stonework. Architectural Stone Company was meticulous in performing all of these tasks, and met every challenge posed by the real-world site conditions with a single-minded commitment to the final result that was refreshing to see. Architectural Stone's work showed the campus community that it's possible to do new work of the same quality as our historic buildings.

Sincerely,

Todd Furgason
